

What is the PROBLEM?

CARELESS

DELIBERATE

ACCIDENTAL

WHERE DOES THE TRASH COME FROM?

- Careless - debris that has been left behind by waterway users
- Deliberate - debris that is deliberately dumped
- Accidental - debris that blows out of vehicles on the road and ends up in the water

WHY IS DEBRIS SO BAD FOR THE WATER?

- Damage - debris blows into the water, sinks to the bottom and snuffs out any chance at aquatic plant growth, which is the foundation for a thriving ecosystem
- Expensive - debris clogs up the storm drains and retaining ponds, creates muck in the water and requires additional manpower to cleanup
- Eye Sore - debris is unattractive which affects business, tourism and the economy
